

Check Printing

Print outgoing checks straight onto the bank's leaves, with the amount in words in Arabic or English, one calibrated layout per bank, and control over reprints.

How a check is printed

Positions are millimetres from the top-left corner of the leaf; calibrate once per bank with the test page.

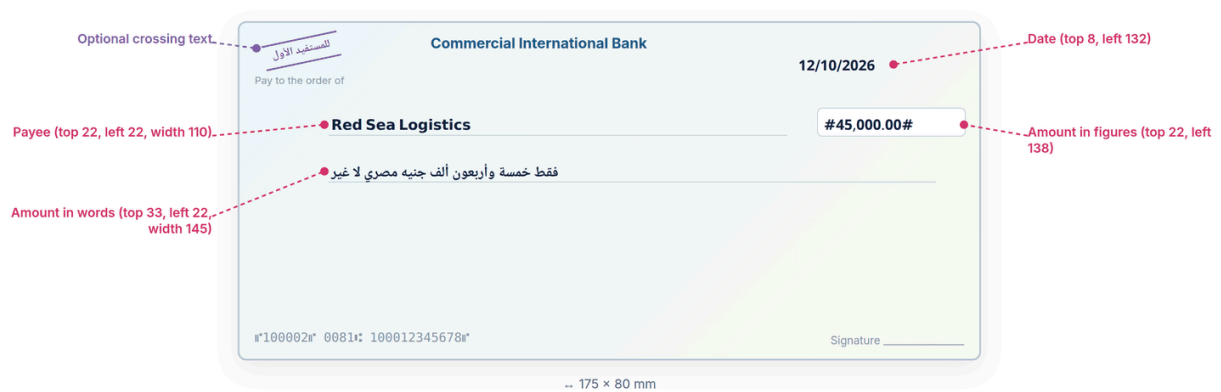

Module: **sa_check_management_print** · Version **18.0.1.1.0** · Author: **Sayed Anwar** · October 2026

1. What the module does

- **A layout per bank:** paper size, font, date format and the position of every field in millimetres from the top-left corner of the leaf.
- **Amount in words:** the commercial Arabic wording used on Egyptian checks ("فقط ... لا غير") or English ("... Only"), for EGP, USD, EUR, SAR and AED, and the unit names of any other currency.
- **Crossing:** a text such as "للمستفيد الأول" at the position you set.
- **Safe printing:** only approved checks print; a Treasury Officer prints once; only a Check Manager can reprint, after a confirmation; every print is logged in the check history.

How a check is printed

Positions are millimetres from the top-left corner of the leaf; calibrate once per bank with the test page.

Where each field sits on the leaf

2. Setting up and calibrating

- 1 Install **Check Printing** from **Apps**. A default layout, **Standard Egyptian Check (175 × 80 mm)**, is created for the company.
- 2 Open **Check Management → Configuration → Check Print Layouts** (Check Manager).
- 3 With a real leaf and a ruler, enter the check width and height in mm, the top/left position of the date, payee, amount in figures and amount in words, the widths of the payee and words areas, the font size, the date format (e.g. %d/%m/%Y) and the words language.
- 4 In **Used For** pick the bank journals whose checks print with this layout. Create one layout per bank whose leaf differs.
- 5 Click **Print Test Page** on plain paper and hold it over a real leaf against the light. If every field is off by the same amount, change **Printer Offset Right / Down** (negative moves left / up) instead of each field.

#250,000.00#

فقط مائتان وخمسون ألف جنيه مصري لا غير

The test page with a sample amount and a dashed leaf outline

Start from the default layout and adjust it; most Egyptian checks are very close to these measurements.

3. Printing a check

- 1 Create the outgoing check as usual (vendor, amount, due date, bank, leaf). The form shows the **Amount In Words** that will be printed.
- 2 Get it approved. A check prints when **Approved** or **Issued** , or in **Draft** when the company does not require approval.
- 3 Load the leaf and click **Print Check** (Treasury Officer). The layout of the check's bank journal is used, else the company default.
- 4 Click **Issue** .
- 5 If the leaf jams or prints wrong, a Check Manager clicks **Reprint Check** ; a confirmation appears and the print is logged as a copy.

An approved check with the Print Check button and the amount in words

12/10/2026

Red Sea Logistics

#45,000.00#

فقط خمسة وأربعون ألف جنيه مصري لا غير

What goes to the printer: only the values, placed on the leaf

The printed date is the check's due date, the payee is the vendor's name, and the figures are framed like #45,000.00# so no digits can be added.

Rights

Role	Printing
Check User	Sees layouts and the amount in words; cannot print.
Treasury Officer	Prints approved checks once.
Check Manager	Reprints, and creates and edits layouts.

Messages you may see

Message	Fix
Check must be approved before printing	Submit it for approval and get it approved.
No check layout is configured for this bank	Link the layout to the bank in "Used For" or make one layout the company default.
Check was already printed	Only a Check Manager can reprint.
Set the bank journal and check number before printing	Pick the bank journal and the checkbook leaf.
