

Check Sales

Stop selling on credit to customers whose checks bounced, and count uncollected checks in the customer's credit limit.

How the Sales add-on protects you

Two independent controls, both set in Check Management settings → Sales.

Bounced checks on sales orders

Open checks in the credit limit

A check settles the invoice at receipt, but the money is not in the bank yet — so it still counts as credit risk.

Module: **sa_check_management_sale** · Version **18.0.1.2.0** · Author: **Sayed Anwar** · October 2026

1. What the module does

Bounced checks on sales orders

When the customer (or any contact of the same company) has incoming checks that are **Bounced** or under **Legal Action** , the quotation shows a red banner with the number of checks and their total. With the **Block confirmation** policy, confirming is refused for everyone except Check Managers.

A quotation for a customer with an unresolved bounced check

Open checks in the credit limit

A post-dated check settles the invoice when received, so the customer's balance drops before the money reaches the bank. The module adds the uncollected checks (**Received** , **Under Collection** , **Discounted**) back into the credit used by Odoo's credit-limit warning, and says so in the message.

How the Sales add-on protects you

Two independent controls, both set in Check Management settings → Sales.

Bounced checks on sales orders

Open checks in the credit limit

A check settles the invoice at receipt, but the money is not in the bank yet — so it still counts as credit risk.

The two controls

2. Setup

- 1 **Check Management** and **Sales** must be installed; this module installs itself.
- 2 Open **Check Management → Configuration → Settings**, block **Sales**.
- 3 **Bounced Checks on Sales**:
 - **Do nothing**: no warning.
 - **Warn on sales orders** (default): a red banner only; anyone can confirm.
 - **Block confirmation**: the banner, and confirmation is refused for everyone except Check Managers.
- 4 **Open Checks in Credit Limit** (on by default). Works with Odoo's credit limit: enable it in **Accounting → Configuration → Settings → Customer Credit Limit** and set a limit on the customer.

The Sales block in the settings

Good to know

- Only **payment** checks count; guarantee and security checks are ignored.
- A bounced check stops counting as soon as it leaves Bounced / Legal Action: re-deposited, replaced, settled or returned.
- Checks are searched for the customer's whole company (all contacts), in the order's company.

- Only checks whose receipt entry is posted count toward the credit limit (with settlement "at collection" the invoice is still open, so it already counts).

A Check Manager can still confirm the order under the block policy, for cases where the customer paid cash or agreed a settlement.
